# BDD in a Nutshell

What is BDD? → Behaviour Driven Development

A Traditional Development Process

(1) → (2)

Stakeholder tells product
owner business needs.

Product owners
writes requirement

(4)

Testers Translate
Requirement into
Test cases

(3)

Developer translate
Requirement into code

(5)

Technical writer translate
Work into technical document

Finish Product

What is this BDD Things?

A BDD Development Process

(1)

Stakeholder + product owner
talk about business nest

(2) Product owner, developer and Tester

collaborate around requirement

← Three Amigos!!!

(5)

Automated tests report
back against features
and SCENARIOS

SCENARIOS
Given
When
Then

(3)

Developer uses
SCENARIOS for
Automated tests.

(4)

Testers also uses SCENARIOS as
basis for their tests.
